

The all new 499P9H1: Why not go Super-Wide?

Philips unveil a visual feast with their new 49-inch “Super-Wide” curved monitor – because sometimes, you want it wider

It goes without saying that with more screen space, you can do more – which is why so many professionals today choose to view two or even more screens simultaneously.

With the new Philips Super-Wide option, you really don't need to. The process known as tiling can be a thing of the past, so kiss goodbye to those annoying borderlines when monitors are placed side by side.

By “SuperWide”, we mean it: the Philips 499P9H1 measures a respectable 13.8 inches high and an eye-splitting 49 inches wide. That’s an extreme aspect ratio of 32:9 – or the equivalent of two 27-inch widescreen (16:9) monitors side by side.

This ultimate entry to the Philips Brilliance line made an almighty stir when we unveiled it at Berlin’s headline-grabbing IFA tech show in September. Now it’s finally available for all. Because sometimes, you want it wider.

Because bigger is better

Not convinced? Wonder when you'll need all that extra space? Allow us to explain the benefits: to outline why bigger really is better.

In a nutshell, multi-tasking: how much of the working day do you spend opening and closing programs, flicking between tabs, maximising and minimising windows? Why cut and paste when you can drag and drop?

The ideal solution to such niggles is the larger virtual desk space that comes with an ultra-wide monitor.

With so much useable space, on-screen conference calls become a breeze. Moreover, the increased field of vision allows users to sit further back from the screen, reducing eye fatigue and making longer working hours more comfortable. Eye comfort is further improved by the curved design, which offers a more natural viewing environment with less image distortion.

The 499P9H1 is the ultimate display for increased efficiency in the workplace – but what about after hours? There are boundless advantages that a wider, more immersive screen gives to gamers.

Hey, good looking

If you're worried about how such a monstrous monitor might look when it's not in use, fear not – the 499P9H1 doesn't just look good, it looks award-winning good.

That's right: the Philips Brilliance 49-inch Super-Wide monitor was awarded the prestigious Red Dot Award for Product Design – impressing a panel of 40 judges with its innovative design, beating off competition from more than 6,000 entries from 59 countries. So don't just take our word for it.

Not just bigger, also better

Want to know what's under the hood before you take a test drive? No problem – the specs on this champion product are enough to make the most discerning tech-head swoon.

We're talking 5K resolution – a major cut above 4K, Ultra HD, Full HD, “Cinema HD”, 2K, 1080p or pretty much any of the competition when it comes to pixels – which basically means you see more. Feel more. Experience more. In fact, the 499P9H1's DQHD (dual quad HD) output, at 5120 x 1440 resolution, is way more detailed than even the 3840 x 1080 found on most other Super-Wide monitors.

It's all artfully presented with 1800R curvature, for an easier and more immersive viewing experience, which is friendlier on the eyes to help you get the job done on time.

Off-screen functionality

Apart from its peerless size and viewing experience, this Philips Brilliance curved Ultra-Wide monitor is fine-tuned with plenty of off-screen additions designed to enhance efficiency.

The Windows Hello pop-up webcam is ideal for video calls to anyone, anywhere – it's set up for biometric authentication, to ensure you can trust who is online. But it's only online when you want it to: the webcam slides away just as easily as it pops up.

Meanwhile you can enjoy easy connectivity with all the devices and storage you will ever need thanks to an array of ports and connections. USB Type-C docking, allowing charging, transferring and streaming through a single cable with reversible connector, while you are also good to go with two regular USB 3.0 ports, DisplayPort 1.2 graphics input, two HDMI 2.0 digital ports and RJ45 Ethernet input. So you're covered whatever the challenges ahead.

Philips Monitors

Philips was founded as far back as 1891 in the Netherlands, and has since engaged in more than a century of innovation and entrepreneurship.

Thanks to the company developing timeless business values, Philips has become one of the most highly recognized and trusted brands in the world today. This comes from a tradition of caring about people's needs, innovating based on ever-changing insights, and working to make a positive change in people's lives – traditions as meaningful now as they were in the company's beginnings.

Philips monitors stand for excellent picture quality, and providing innovative solutions to problems people really care about. To reflect this Philips commitment, Philips has created the slogan: 'Innovation and You'. – See more at www.philips.com
